

PY 1

This is a Prove Yourself (PY). It allows you to showcase all of the topics that you have learned so far. You can use any of the previous projects (website and curriculum) that you have completed to help complete this PY.

The Sensei can give hints and minimal help because the goal of a PY is to have the student showcase their own unique solution to the problem.

1. Write HTML Code in between `<body>` `</body>`

1.1. create a paragraph tag with the id as "msg". The paragraph tag will have the word "msg" in between the open and closing tags.

1.2. create another paragraph tag with the id as "btn1". The paragraph tag will have the word "btn1" in between the open and closing tags.

1.3. create another paragraph tag with the id as "btn2". The paragraph tag will have the word "btn2" in between the open and closing tags.

1.4. create another paragraph tag with the id as "btn3". The paragraph tag will have the word "btn3" in between the open and closing tags.

2. Write JS Code in between the `<script>` `</script>` and inside the **function main()**

2.1. use `document.getElementById()` to link JS code with the tag whose id is "msg" and then change the content of the paragraph tag to "on". HINT: use `.innerHTML`.

2.2. use `document.getElementById()` to link JS code with the tag whose id is "btn1" and then change the content of the paragraph tag to "open state". HINT: use `.innerHTML`.

2.3. use `document.getElementById()` to link JS code with the tag whose id is "btn2" and then change the content of the paragraph tag to "my coupon". HINT: use `.innerHTML`.

2.4. use `document.getElementById()` to link JS code with the tag whose id is "btn3" and then change the content of the paragraph tag to "click to expand". HINT: use `.innerHTML`.
